## **Inclusive Business**

Opportunities for private sector and government to promote jobs and services for the poor

Presentation at the 4<sup>th</sup> ASEAN+3 Village Leader Exchange program (19-23 Sept 2016, Shanghai)

For further questions, please contact: Dr. Armin Bauer (Principal Economist; and Coordinator of ADB's Inclusive Business Initiative; Asian Development Bank (ADB), abauer@adb.org, Tel: 0063-2-632-5550)

### **Table of Content**

- 1. Why IB? Private sector delivers jobs and services for low income people; but we need a special private sector
- 2. What is Inclusive Business (IB) ? Inclusive Business provide solutions for the relevant problems of BoP
- 3. What can governments do? Accreditation, business plan development / incubation; start-up support; patient capital financing, impact measuring and reporting
- 4. What is happening in Asia / ASEAN+3? Increasingly a lot
- 5. What is ADB doing? How we can help you
- 6. Further reading Interesting new topic

# 1. Why IB?

# Why involving the private sector in poverty reduction?

- Low income people depend more on the private sector than the better off
  - 1. They need jobs and income opportunities,
  - Most of the affordable services and goods they consume/need come from the private sector, because government social systems often don't work
  - How to find them?
  - How to encourage them?
  - How to grow them?
- 2. CSR is not enough and the traditional SMEs or large companies (and even state owned utilities) may involve the poor but often do not provide solutions to the relevant problems of the poor
- 3. Only a small number of the private sector is really business AND development oriented → Inclusive Business
  - Issue is to find those IB, distinguish them from other companies, and
  - encourage them better (government programs at the moment ignore them)

### **Triple Wins**

what is in it for business, government, the poor? IB is good for

- Poor and low income:
  - Gives them well paid jobs and income opportunities
  - Affordable relevant services (and goods)
- Business → new products / new markets, new sale, better inputs, more effective value chain
- Government

  - Stimulates innovation
- Investors:
  - Brings new investment opportunities
  - IB investments are generating same or even higher returns; risk need to be understood)
- Sometimes also benefits for Environment/climate (triple bottom lines); e.g. renewable energy, cleaning (scavengers, Delta Minerals), climate protection
- → but the investment must be financially viable and bankable

## 2. What is IB?

## What is IB?

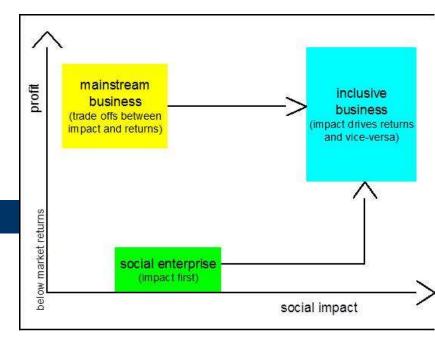

Engaging the poor as consumer, supplier, laborer, distributor is not enough

### IB are

- commercially viable and bankable companies
- whose core business model is
- to provide in scale –
- innovative and systemic solutions
- to the relevant problems of the
- poor and low income people (BoP = i.e. bottom 60% income groups)

### IB:

- Create decent jobs and income opportunities
- Provide essential services and goods

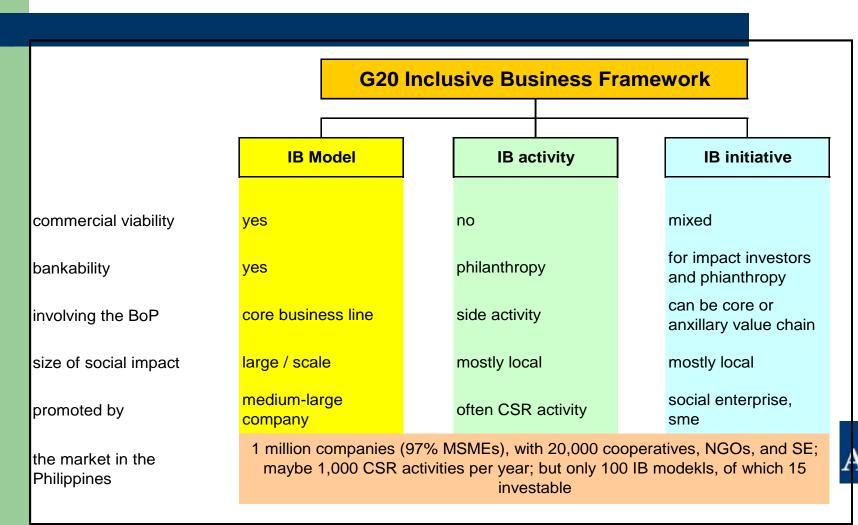

# IB deals are made and not found

IB engage the poor as

- Supplier, laborer, distributor
- consumer

## 3 types of IB

### What is it not?

- SME (informal sector work) → involves the poor, but does not provide systemic solutions; most IB are medium sized investments
- CSR → lack of scale in impact; lack of sustainability from a business perspective, not core business
- social enterprise → Start ups often lack scale in impact and confidence in business success;
- contract farming → often exploitative
- microfinance ("creation/production") → focus on production not financial inclusion,
- Livelihood or farmers development programs → the poor are not business people
- Impact investment → needs to focus on low income people, not on environment or other impact
- Triple bottom line → not all IB investments have to focus on environment and climate change; in fact, many do not
- Shared value → share profit/share value; sharing is not yet a systemic solution to problems of the poor; what is in the center of the business moder the interest of the company or solution of the poor?

## For whom? What is the BoP?

		<b>-</b> 111	The Base of the Pyr	amid in PR China, a			sia and t	he Pacific	,	
2005	2012	RMB		East and	PRChina	Shanxi			$\bigwedge$

# **Financial Viability**

The difference between Viability and Bankability

The importance of Patient capital / The typical money gap

Why banks are reluctant to provide money to IBs, even if they are profitable and bankable

- -Perceived risk
- -Banks are for the large companies or for the SMEs

# **Impact of IB**What is in it - for People?

# IB need to be made and cannot be found

(It requires TA, knowledge of the BoP, innovation, risk appetite, commitment/dedication, change)

### Create well paid jobs → reduce income poverty

- -Reach is not enough: it is about new jobs; and many new jobs (minimum 500 and better more)
- -Depth: the job needs to pay more than the market rate
- → It is not about involving the poor in the value chain, but creating income for them
- → it is not simply contract farming (often exploitative)
  - → IB requires highly productive businesses (business innovation)
- Systemic change → requires innovation: business processes, social, environmental

### Services delivery and relevant goods

- -Criteria: Affordable, Relevant, High quality (the poor cannot afford crappy products)
- -Examples: Housing, health, water, education, energy, access to finance

## **IB** needs innovation

### - some examples -

### Agribusiness

- –Jain irrigation (IND) → become provider of everything
- -Rocky Mountain Coffee (PHI) → environment
- -Kennemer Foods (PHI) → add insurance
- -CG (KOR -VIE, chili) → strategic CSR,
- -Engro (PAK, biorice) → bankable CSR
- -Urmatt (THA) → bioeggs
- -East West Seeds (THA, PHI, INO)
- -Akay (IND, CAM) → spices

**Health:** Aravid Eye Hospital (IND) and Salauno (MEX)

**Education:** Hypocampus (IND), Lego (BRA), Technical training: PHI, IND (rural IT training)

**Utilities:** Manila Water, Condenza (COL), Simpa Solarlight (IND)

Finance: Mibanco (BRA)

**IT:** Apps for the Indian Fishermen; (COL) selling of village products through internet,

INO – RUMA; is Alibaba an IB?

### What can government and others do?

# 3. How to promote IB?

- (1) Accreditation + and ex-ante impact assessment
- (2) Policy alignment, business ombudsman
- (3) Investment
- (4) Business plan support
- Improving business
- Enhancing social impact
- (5) Knowledge, advocacy

# (1) Finding / Making IB → IB Accreditation

### Why?

- -Without knowing who is IB and who is not one cannot justify government support programs
- -Branding helps the company
- Accreditation can then be used for prioritizing existing (and rationalizing) industry support programs → saves money in the budget through better targeting

### How?

- -Composite rating tool, government and private sector set criteria,
- -third party validation avoids political influencing,
- -ex-ante assessment tool; verified after 1 year;
- -simple, not costly neither for government nor for companies; not consultant oriented

### Benefits

- -Triggers access to finance (local, international, impact investors)
- -Facilitates bureaucratic processes (licencing) and protects against corrupt practice AT
- Reporting (2-4 pager) and seal improves branding
- -Reward for social impact makes CEOs and employees "more happy"

PHI and THA took the lead

# How would IB accreditation work?

Composite rating tool
Business (35%), social impact (50%), innovation (15%)
Social: reach, depth, systemic change
Ex-ante, preliminary, third party validation

Notes: company scoring > 4.5 is an IB and are eligible for financing. Those scoring between 3.5 and 4.5 could be included in the infrastructure support. Those below 3.5 are excluded.

See: Company self reporting: http://www.adb.org/sites/default/files/phi-ib-impact-assessment\_0.pdf:

# Better business environment

## (2) Policy alignment

- Which existing industry support programs can prioritize IB?
- What new incentives can the government bring

  - Financing: credit lines + risk guarantee + equity investment (without government control)
  - (tax incentives)
  - Support in licencing, removing bureaucratic hinderances
  - Priority procurement for IB
  - Technical assistance grant

- What money IB need? → Patient capital
  - Not necessarily grant but patient capital
  - The problem of being in the middle: capital for SE is often available, capital for IB not
  - Combination of equity and debt
  - Ticket sizes: \$0.2-\$5 million; thereafter go to ADB or IFC or commercial bank
  - Tenure: 5-7 years
- Equity
- Risk guarantees for banks
- Loans
  - Banks
  - Government (example of PRC Shanxi)

# (4) IB business development

### Why?

- Piloting is often done by companies, but they often do not scale up, even when they are large companies
- Sometimes we need to develop new innovative practices; a vision from the CEO is not enough to make things happen
- Especially larger companies need it, when they scale up their pilots
- Often more important than the financing itself

### How

- Matching grant for pre-and post investment support:
- Not for start ups and piloting
- Different sizes: \$20,000 \$200,000
- Targeted to the needs of the companies
- Cooperate with other development partners

# (5) Advocacy and knowledge

### **Knowledge work**

- sector studies
- Workshops
- Bankers training
- Market scoping studies
- Helping companies with making CSR more strategic
- Studies for public utility companies to do IB (actually they would have the "natural" mandate)

### **IB Advocacy**

- Making IB business models known
- IB challenge and awards
- publishing studies on social impact of companies
- Strong role for business associations

# 4. What is going on in Asia / ASEAN?

### Poverty in the ASEAN+ region

Total	67	176"	311				1,342	6,054	29,000	275	595	1,165				147	626			

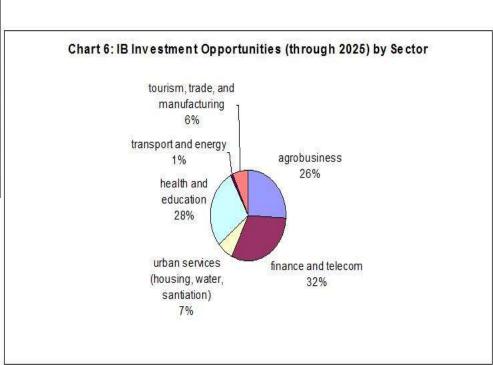

Notes: (1) IB investments are commercially viable companies with investment between \$3 and \$50 (or more) million; For profit SE have investments between \$0.2 and \$3 million. (2) The number of firms or NGOs that call themselves social enterprise" is much higher than the number of commercially viable SE with profit margins of minimum 5%.

Source: There is no registration of IB or SE investments in any Asian country. The above mentioned figures are pure estimates from ADB staff based on earlier market studies and literature review.

### **Opportunities for IB in ASEAN+**

# Some Interesting business cases in ASEAN+

- Manila Water (PHI)
- BPI student loans for skills training (PHI)
- Indofoods (INO), Gladsome Modern Agriculture (Shanghai)
- Microbenefits (IT training for blue color workers (PRC),
- Shared value: Nestle coffee, Unilever, Friesland milk, etc.
- Strategic CSR: CG (KOR+VIE), etc
- Social enterprises: many; example of Grameen (BAN), Narada Foundation \*(PRC)

many other innovative and profitable models and examples with large scale social impact especially in IND

### On the investors side

- Assets managed by impact investors globally increased from \$10 billion in 2010 to \$36 billion in 2012 and \$60 billion in 2014. While this is still small compared to the total portfolio of \$270 trillion in assets, what matters is the rapid growth of the industry and the fact that such investments are increasingly perceived by many investors as valuable. The impact investment industry today comprises over 300 investors worldwide. See Global Impact Investment Network (GIIN). www.thegiin.org
- Between 2006 and 2014, IFC has invested \$1.6 billion in inclusive businesses in Southeast and East Asia. 61% of its investments are in the financial sector and 18% in agribusiness.
- ADB did 16 deals between 2012 and 2015, worth \$520 million in Asia; most of them however were in South Asia, not in ASEAN countries, none so far in PRC

2015 GIIN/JP Morgan survey: banks and other financial institutions fund about 9% of total impact investment assets at the global level. Assuming this ratio holds true for Southeast Asia as well, about \$320 million of impact investments in the region are funded by banks or diversified financial institutions – either domestic or international. This is a very small amount considering the size of bank financing in the region and its banks' high levels of liquidity. As a point of reference, bank financing for SME stood at about \$4.18 trillion in the four largest countries of this study – specifically, at \$4 trillion in China; \$50 billion in Indonesia; \$4.5 billion in the Philippines; and \$130 billion in Thailand by mid-2013

### **Commercial bank investments**

	number of commercial banks				assets (billion USD)	estimated number of

# IB support policies from the governments

- Accreditation: PHI. THA
- Policy alignments and tax incentives: PHI, IND, THA, SIN, HGK, AUS,
- CSR focus: KOR, INO, IND, HGK, SIN, JPN, AUS
- Supporting companies going abroad: JPN
- Linking IB to poverty alleviation programs: PRC ("guangcai" and IPRCC/LGOP) – the 10,000 / 10,000 program
- PRC championed G20 IB discussion in 2016
- APEC study on IB
- The very interesting PRC-JPN-KOR initiative for THA, CAM, LAO, MYN, VIE
- See: bit.ly/IBAsiaHub; http://www.inclusivebusinesshub.org/micro-site/ib-in-asia/countries/#1472619867497-85d96ef7-39de

# 5. What is ADB doing

# Inclusive Business →What is ADB doing?

- Market scoping studies in 2012-2014:
   VIE, IND, BAN, INO, SRI, PAK, PHI, TJK, PRChina
- ADB's IB Initiative (since 2014)
  - IB is in ADB's Strategic Framework, IB Action Plan (2016)
  - More ADB financed private sector deals are IB
    - from 1 project on average in 2000-2012 to
    - 16 deals (\$560 million) in 2012-2015
    - ex-ante impact assessment
  - Working with the public sector on better enabling environment for IB: IB accreditation, IB policy alignment, public sector loans for IB,
     → PHI, PAK, MYN, VIE, INO, TAJ PRC/Shanxi
  - IB in G20 + APEC
  - Knowledge work and partnership building: sector studies, 2<sup>nd</sup> Asia IB Forum (Feb 2016), market scoping studies, thematic studies (role of SE, gender, role of development banks, study on labor impact, IB finance study, etc.)
- How can ADB help IB in PRC/Shangxi?

# Inclusive Business →What is ADB doing in PRC?

- IB in Shaxi project
- IB in Heilonjiang project
- Other provinces (Inner Mongolia)
- IB and "guangcai"
- Market scoping study: 2 workshops in mid November for Southern and for Northern PRC
